

ENVIRONMENTAL POLICY

SKN Electronics Limited is aware of the growing need to protect the environment and is ensuring that whilst its impact within the electronics sector is maximised, the resulting impact in the world in which we all have to live is minimal.

The Company and all its employees are making every effort within their sphere of control to minimise any adverse effect on the environment and this is re-enforced in each employees Company Handbook.

In addition to our legal responsibilities, we look at reducing energy consumption both internally and externally by ensuring the heating levels are kept at a reasonable level, any excess lights are switched off, recycling of waste paper etc. is introduced and planning for journeys made on Company business is done, to minimise the fuel used.

We are also actively looking at working towards developing and implementing a documented Environmental Management System to meet the requirements of ISO 14001:2004.
